AWM Database Upgrading Steps:

1. Using the revision link above, download the awmData.zip file to a temporary location
on your system.
2. Locate the local folder of your AWM program file and rename the existing awm_data.mdb file for backup (for example, "OrigAWM_data.mdb").
3. Move the downloaded awm_data.zip file to the program file folder.
4. Unzip and extract the awm_data.mdb and save it the program folder.
5. Test to make sure AWM runs properly.
Note: Once AWM is working satisfactorily you may delete the renamed backup file
("OrigAWM_data.mdb").
